Title: Task Analysis and User Flow – Movie Ticket Booking App

AIM:

To understand and document the steps a user takes to complete the main tasks within a Movie Ticket Booking Application and to represent them using user flow diagrams and wireframes in Lucidchart.

TOOL USED:

Lucidchart – https://www.lucidchart.com/pages/

PROCEDURE:

Step 1: Assigning Tasks

The main tasks identified in the Movie Ticket Booking App are:

1. Browsing Movies
2. Searching for a Specific Movie
3. Selecting Seats
4. Booking Tickets (Checkout Process)
5. Viewing / Tracking Booked Ticket

Step 2: Document User Flows

1. Browsing Movies

Steps:

1. Home Screen – User opens the app and lands on the home screen.
2. Movie Categories – User views trending, upcoming, or recommended movies.
3. Movie List – User scrolls through the available movies.
4. Select Movie – User taps on a movie.
5. Movie Details – User views movie description, rating, duration, and trailer.

User Flow:

Home Screen → Movie Categories → Movie List → Select Movie → Movie Details

Searching for a Specific Movie

Steps:

1. Search – User taps on the search bar.
2. Enter Movie Name – User types the movie name.
3. Search Results – System displays matching movies.
4. Select Movie – User selects a movie.
5. Movie Details – User views movie information.

User Flow:

Search → Enter Movie Name → Search Results → Select Movie → Movie Details

3. Selecting Seats

Steps:

1. Choose Theatre – User selects preferred theatre.
2. Select Showtime – User selects date and time.
3. Seat Layout Screen – User views available seats.
4. Select Seats – User chooses available seats.
5. Confirm Seats – User confirms selected seats.

Decision Point:

- Are seats available?
  - Yes → Confirm Seats
  - No → Display “Seats Not Available” and reselect

User Flow:

Choose Theatre → Select Showtime → Seat Layout → Select Seats → Confirm Seats

4. Booking Tickets (Checkout Process)

Steps:

1. Booking Summary – User reviews selected movie, seats, date, and price.
2. Proceed to Payment – User clicks “Proceed”.
3. Select Payment Method – User chooses UPI / Card / Net Banking.
4. Enter Payment Details – User enters required information.
5. Confirm Payment – User confirms transaction.
6. Booking Confirmation – System generates ticket.

User Flow:

Booking Summary → Proceed to Payment → Select Payment Method → Enter Payment Details → Confirm Payment → Booking Confirmation

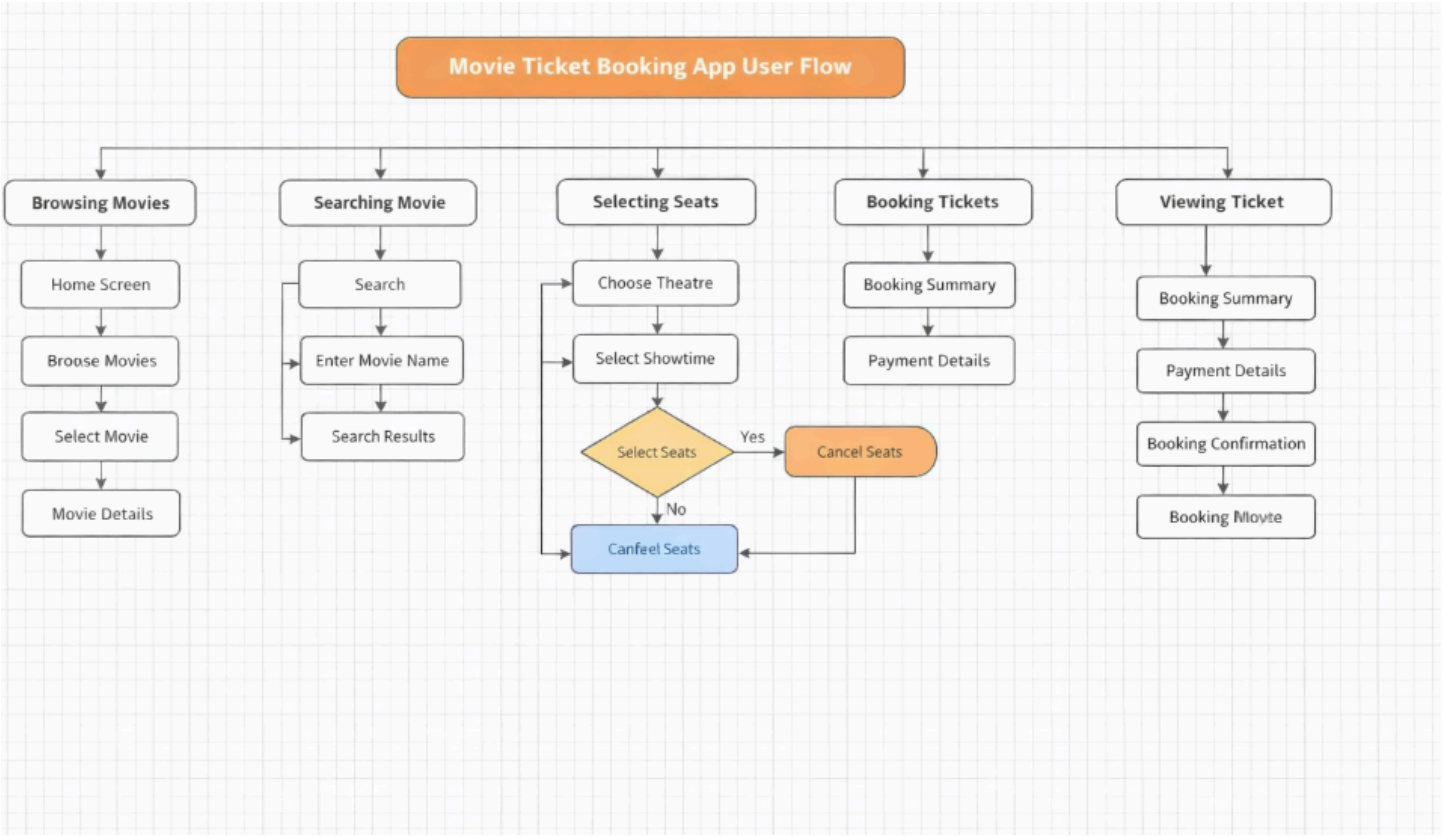
5. Viewing / Tracking Ticket

Steps:

1. Go to My Bookings – User navigates to profile section.
2. Select Booking – User selects booked movie.
3. View Ticket – User views QR code and booking details.
4. Download / Share Ticket – Optional action.

User Flow:

My Bookings → Select Booking → View Ticket → Download / Share Ticket



Step-by-Step Procedure to Create User Flow in Lucidchart

1. Create a New Document

- Open Lucidchart.
- Sign in or create an account.
- Click on “+ Document” or “Create New Diagram”.

2. Select Template

- Choose “Blank Document” or “Flowchart Template”.

- Click Create.

3. Add Shapes for Each Step

Use the following shapes:

- Oval → Start / End
- Rectangle → Process (User Action)
- Diamond → Decision (Seat availability / Payment success)

Add shapes for:

- Open App
- Browse Movies
- Search Movie
- Select Theatre
- Select Showtime
- Select Seats
- Booking Summary
- Payment
- Confirmation
- View Ticket

4. Connect the Shapes

- Use arrow connectors.
- Ensure flow direction is clear (Top to Bottom or Left to Right).
- Connect decision diamonds properly with Yes / No labels.

5. Use Different Shapes for Different Actions

- Rectangles → User actions
- Diamonds → Decision points
- Ovals → Start and End

6. Organize the Flowchart

- Arrange browsing, searching, seat selection, and payment sections clearly.
- Use different colors for:
  - Browsing (Blue)
  - Seat Selection (Orange)
  - Payment (Green)
  - Confirmation (Purple)

7. Review and Save

- Check if all steps are connected correctly.

- Click File → Save.
- Export as PDF or Image for submission.

RESULT:

The task analysis and user flows for the Movie Ticket Booking App were successfully documented and represented using Lucidchart. The flowchart clearly illustrates the step-by-step interaction of users within the interaction.
